

PHYSICAL STORE

Employee Training Guide

Step-by-step training / Guia de capacitacion

WHO SHOULD USE THIS	WHAT THIS GUIDE COVERS
Cashiers, supervisors, store managers and employees receiving inventory.	Opening the register, sales, customer payments, returns, stock transfers and daily closeout.

IMPORTANT

The interface remains in English. This guide repeats the exact button names and adds short Spanish explanations so a trainer can guide a new employee without changing the system language.

Training edition - July 2026

SECTION 01

Start Here

The Physical Store workspace is a separate operating environment for a fixed retail location. Customers are shared, while stock, cash shifts and store settings belong to the selected location.

Cashier

Open one register, process sales and returns, record approved cash movements, and close the same register.

Supervisor

Confirm inventory, receive transfers, review differences, void incorrect movements, and reopen a close with a reason.

Store Manager

Review store dashboard, tax settings, reorder alerts, register history and general closeout.

Customer-facing tools

Use Customer Display, receipt printing and the cash drawer only when the store setup enables them.

Core rule

Always select the correct Physical Store and open the register assigned to this computer before accepting cash, completing a store sale or processing a refund.

Daily workflow

1	2	3	4	5	6
Sign In	Select Store	Open Register	Sell / Return	Count Drawer	Close Store

Flujo diario: entrar, seleccionar la tienda, abrir la caja, trabajar, contar el efectivo y cerrar.

SECTION 02

Sign In and Select Physical Store

Each employee signs in with an individual account. Never share credentials because sales, transfers, cash movements and approvals are recorded by user.

1

Open TOOLS4CARE

Go to the production URL and enter your Email Address and Password.

Abra el sistema e ingrese su correo y contraseña.

2

Choose the location

Use the location selector and choose the Physical Store where you are working. Do not select a VAN for counter sales.

Seleccione la tienda física correcta, no una VAN.

3

Confirm the workspace

The sidebar and dashboard should identify the store. Verify the store name before opening a register.

Confirme el nombre de la tienda antes de abrir caja.

4

Use your own computer

A register shift is tied to the cashier and this computer. Do not continue another employee's open shift.

El turno pertenece al cajero y a esa computadora.

Login	PHYSICAL STORE
Email Address	employee@company.com
Password	*****
Location	Physical Store - Main Counter

[Sign In](#)**If the wrong menu appears**

Stop and verify the selected location. A VAN, Online Store and Physical Store can share customers but use different inventory and operational menus.

SECTION 03

Physical Store Dashboard

The dashboard is the store's home page. It summarizes sales, returns, cash, inventory risk and the actions employees use most.

New Sale

Start a walk-in or saved-customer transaction at the counter.

Cash Register

Open, monitor, count and close the drawer assigned to this cashier and computer.

Process Return

Find the original receipt and refund only eligible quantities.

Find Customer

Search by name, phone, email, address or business; create a customer when needed.

Close Store

Review the general store close after individual registers are closed.

Inventory Alerts

Review low stock, best sellers at risk and pending transfer receipts.

Initial inventory

A supervisor confirms the starting inventory once the first physical count or transfer is complete. The system saves the product-by-product baseline.

Dashboard numbers are operational indicators, not a replacement for counting the physical drawer or merchandise.

SECTION 04

Open the Cash Register

The register must be open before cash sales, customer A/R payments or store refunds. Opening creates a shift for one cashier on one computer.

1

Open Cash Register

From the dashboard, select Cash Register.

Entre a Cash Register desde el dashboard.

2

Verify register and cashier

Confirm the register name, your employee name and this device.

Confirme caja, cajero y computadora.

3

Count the opening float

Count the physical starting cash and enter the exact amount in Opening Float.

Cuente el fondo inicial real.

4

Add an opening note

Record anything unusual, such as a sealed cash bag number or approved starting difference.

Anote cualquier detalle especial.

5

Select Open Register

The expected cash starts with the opening float and updates during the shift.

Abra la caja y verifique el total esperado.

Cash Register	PHYSICAL STORE
Register	Front Counter 1
Cashier	Signed-in employee
Opening Float	\$100.00
Status	Ready to open

[Open Register](#)**Never do this**

Do not enter estimated money, borrow another cashier's session, or open multiple registers for the same drawer.

SECTION 05

Create a Sale

The fastest store workflow is scanner first: scan products, confirm quantities, then continue to payment. Camera scanning stays optional.

- 1

Choose the customer

Select No Client Sale for a walk-in, or find/create a customer when the purchase should be saved to an account.

Use No Client para venta rapida o busque el cliente.
- 2

Add products

Scan a barcode with the USB scanner and press Enter. You may also search by product name, code or brand.

Escanee o busque el producto.
- 3

Build the cart

Adding an item keeps the product list open. Continue scanning; use plus or minus to correct quantity.

Siga agregando sin salir de la lista.
- 4

Check stock and price

Verify product, price, available quantity and any approved discount before payment.

Revise producto, precio, inventario y descuento.
- 5

Select Next - Payment

Continue only after the cart matches the merchandise at the counter.

Pase a pago cuando la lista este correcta.

Scanner priority

The USB barcode scanner is the main store tool. Use Camera Scan only when a barcode cannot be captured with the scanner or no scanner is connected.

Add Products	PHYSICAL STORE
Search / Scanner	Search by name, code or brand...
Cart	3 units - \$39.98
Product result	Price, brand and stock visible

Back

Next - Payment

SECTION 06

Customers and Accounts Receivable

Customer accounts are shared across locations. The selected Physical Store still records which register collected a direct balance payment.

Search

Find a customer by name, phone, email, address or business. Confirm at least two identifiers before selecting.

Create

Use Client to add a new account. Avoid duplicates by searching phone and business first.

Balance Due

A positive amount is money owed by the customer. Zero means no balance due.

Available Credit

Shows remaining approved credit. Do not confuse it with the current balance or cash available.

1

Open the customer

Confirm the customer name, business and phone before viewing or collecting a balance.

Confirme que sea el cliente correcto.

2

Review Balance Due

Check the amount owed and any payment agreement before accepting money.

Revise la deuda y acuerdos.

3

Collect payment

Select the payment method and enter only the amount received. Store cash payments require an open register.

Registre solamente el dinero recibido.

4

Give proof

Print or send the resulting receipt when available and confirm the updated balance.

Entregue recibo y confirme el nuevo balance.

Do not create credits by mistake

Never enter more than the customer's balance as a direct A/R payment. A product return and a customer payment are different transactions.

SECTION 07

Collect Payment

The payment page is intentionally simple. Choose the method, confirm the amount received and review the remaining balance or change before saving.

1

Confirm Total to Collect

Compare the system total with the cart and customer display.

Confirme el total de la compra.

2

Choose payment method

Select Cash, Card, Transfer, Check or another approved method. Use Split Payment only when needed.

Seleccione el metodo correcto.

3

Enter amount received

For cash, enter the money handed to you. The system calculates Change. For electronic methods, enter the approved amount.

En efectivo, escriba lo recibido para calcular el cambio.

4

Review Remaining

Remaining must be zero unless an approved customer balance is intentionally going to A/R.

Remaining debe quedar en cero salvo credito autorizado.

5

Save Sale

Save once, wait for confirmation, then print the receipt or open the drawer as configured.

Guarde una sola vez y espere confirmacion.

Payment	PHYSICAL STORE
Total to Collect	\$43.25
Payment Method	Cash
Amount Received	\$50.00
Change	\$6.75
Remaining	\$0.00

Customer Display

Save Sale

Cash accuracy

Count the customer's cash aloud, enter the amount before opening the drawer, and count the change back to the customer.

SECTION 08

Tax, Customer Display, Receipt and Drawer

These tools are location settings. They may be enabled or disabled for one store without changing a VAN or Online Store.

Function	Use	Employee action	Important control
Sales Tax	Adds or extracts the configured store tax.	Confirm the tax indicator before saving.	Only managers change the rate or included setting.
Customer Display	Shows products, tax, total, payments and balance to the customer.	Open when the customer wants to review the order.	It is optional and contains no cashier controls.
Print Receipt	Prints a thermal receipt after a completed sale.	Confirm the printer and paper before reprinting.	Do not create a second sale to replace a receipt.
Open Drawer	Triggers a drawer connected through the receipt printer.	Open only for an approved cash reason.	Browser kiosk printing may be required.

Tax is optional per sale

If the location is configured for tax, use the tax control according to store policy. The receipt and customer display must match the amount collected.

Customer privacy

Close the Customer Display after the transaction. Never leave another customer's name, balance or purchase list visible.

SECTION 09

Returns and Refunds

Returns start from the original transaction. The system prevents returning more units than were sold and restores approved quantities to the selected store inventory.

1

Select Process Return

Open return mode from the dashboard or store sales tools.

Entre a Process Return.

2

Find the receipt

Search the customer or walk-in sale and open the original transaction.

Busque la venta original.

3

Choose quantities

Use plus and minus to select only the items physically received. Review Already Returned.

Seleccione solo lo recibido y revise devoluciones previas.

4

Record the reason

Choose or type a clear return reason and inspect the merchandise.

Registre el motivo real.

5

Choose return type

Money Refund returns money by the approved method. Reduce A/R lowers customer debt and does not remove cash.

Reembolso devuelve dinero; Reduce A/R reduce deuda.

6

Confirm

Verify total, method, items and customer. Cash refunds require an open register.

Confirme total, metodo, productos y cliente.

**Never refund
without
merchandise**

Follow store policy for damaged items, exceptions and manager approval. Do not use a negative sale or a manual withdrawal to imitate a return.

SECTION 10

Store Inventory

Physical Store inventory is independent from Warehouse and each VAN. A shared product catalog does not mean shared quantity.

Store Stock

The quantity physically available in this retail location.

Warehouse Stock

Central quantity used to replenish stores and VANs.

VAN Stock

Quantity assigned to one mobile route or vehicle.

Online Availability

May follow its own location and selling rules.

1

Search or scan

Find the product and confirm the selected inventory location.

Busque el producto y confirme la ubicacion.

2

Review quantity

Compare system stock with the physical shelf or receiving count.

Compare sistema con conteo fisico.

3

Adjust only with permission

Record a reason for damage, correction or authorized count adjustment.

Ajuste solo con permiso y motivo.

4

Watch reorder alerts

Best sellers at risk, low stock and out-of-stock products should be prioritized for replenishment.

Priorice mas vendidos con poco inventario.

Starting inventory

A supervisor confirms Initial Store Inventory only after the store count is credible. The saved snapshot supports later discrepancy review.

SECTION 11

Transfers and Receiving

A stock transfer records the product, quantity, origin, destination, sender and receiver. Destination stock is updated atomically, then the receiver confirms delivery.

1

Create transfer

Choose the origin, destination, product and quantity. Confirm enough stock exists at the origin.

Seleccione origen, destino, producto y cantidad.

2

Record reason

State why merchandise is moving, such as store replenishment or VAN restock.

Escriba el motivo de la transferencia.

3

Sender verifies

The employee initiating the transfer checks product and count before dispatch.

Quien envia confirma producto y cantidad.

4

Receiver counts

At the destination, open Inventory Awaiting Receipt and compare the delivered quantity.

Quien recibe cuenta la mercancia.

5

Confirm Received

Select Confirm Received only after the physical count matches.

Confirme recibido solo si coincide.

6

Escalate differences

If quantity or product is wrong, do not confirm. Contact a supervisor and preserve the package or transfer reference.

Si no coincide, no confirme y avise.

Inventory Awaiting Receipt	PHYSICAL STORE
Product	COOL CARE PLUS 5IN1 SPRAY
Transfer	Warehouse to Physical Store
Quantity	12 units
Sent by	Employee name and time

Confirm Received

Control: The sender and receiver are recorded separately so inventory differences remain traceable.

SECTION 12

Cash Movements During the Shift

Deposits, withdrawals and expenses change expected cash. Every movement needs an amount, reason, employee and time.

Movement	When to use	Effect on expected cash	Example
Deposit	Approved cash added to the drawer outside a sale.	Increases	Additional change fund
Withdrawal	Approved cash removed and secured elsewhere.	Decreases	Safe drop
Expense	Approved store expense paid from the drawer.	Decreases	Emergency store supply
Void	Supervisor correction of an incorrect movement.	Removes original effect	Wrong amount or duplicate

1

Select movement type

Choose Deposit, Withdrawal or Expense.

Seleccione el tipo correcto.

2

Enter exact amount

Count and enter the money moved, not the drawer total.

Ingrese solo el dinero movido.

3

Enter reason

Use a clear business reason. Keep supporting documents.

Escriba un motivo claro y guarde evidencia.

4

Supervisor void only

An incorrect movement stays visible and is voided with a reason, employee and timestamp.

El movimiento no se borra; se anula con auditoria.

No shortcuts

Never use a cash movement to correct a sale, return, customer payment or counting difference. Correct the original operation or escalate it.

SECTION 13

Close the Register and Store

Close each cashier register first. The store's general closeout is reviewed after all operating drawers are counted and closed.

1

Stop transactions

Finish or cancel active sales and verify pending offline activity.

Termine ventas y revise actividad offline.

2

Count physical cash

Count the drawer without looking for a number to match. Enter Cash Counted exactly.

Cuenta primero y escriba el total real.

3

Review System Expected

Expected Cash equals opening float + cash sales + A/R cash - cash returns + deposits - withdrawals - expenses.

Compare contado contra esperado.

4

Explain variance

If variance is not zero, recount and document the reason. Do not add a fake movement.

Recuente y explique diferencias.

5

Close this register

Save the close. The snapshot and audit trail remain in history.

Cierre la caja y conserve el registro.

6

General store close

Manager reviews all registers and payment methods, then completes Close Store.

El gerente completa el cierre general.

Close This Register	PHYSICAL STORE
System Expected	\$1,248.50
Cash Counted	\$1,248.50
Variance	\$0.00
Close note	Count verified

[Close Register](#)

Controlled reopening: Only an authorized supervisor should reopen a closed shift. The prior close and reopening reason remain in history.

SECTION 14

Offline Work and Problem Recovery

The sales workspace can retain approved data locally, but store cash integrity still depends on the original register shift and later synchronization.

Situation	What the employee should do	What not to do
Internet lost	Confirm Offline Ready, continue only approved operations, and keep the browser open.	Do not refresh repeatedly or clear browser data.
Payment queued	Keep the transaction confirmation and allow automatic synchronization when online.	Do not enter the same payment again.
Printer fails	Finish one valid sale, then reprint the receipt after checking printer and paper.	Do not create a duplicate sale.
Scanner fails	Search product by code/name or use optional Camera Scan.	Do not select a similar product without verifying code.
Register not found	Confirm location, cashier and computer; ask a supervisor if another shift is open.	Do not use another cashier's login.
Inventory mismatch	Stop receipt confirmation and notify a supervisor with transfer details.	Do not force an adjustment without a count and reason.

Duplicate prevention

If a button appears slow, wait for the result. Repeated clicks can create operational confusion even when the database blocks duplicate financial transactions.

Security

Never share passwords, leave a signed-in register unattended, or photograph customer account information.

SECTION 15

Quick Checklists

Use these short lists at the beginning and end of every shift. A supervisor may print this page for the counter.

Opening checklist	Closing checklist
☐ Correct Physical Store selected ☐ Own cashier account ☐ Correct register and computer ☐ Opening float physically counted ☐ Scanner tested ☐ Printer paper checked ☐ Customer Display ready if used	☐ Active sales completed ☐ Offline queue reviewed ☐ Deposits / withdrawals documented ☐ Drawer physically counted ☐ Variance reviewed and noted ☐ Register closed ☐ Manager notified for store close

Terms employees must know

English interface term	Meaning / significado
Opening Float	Starting cash - fondo inicial
Expected Cash	System drawer target - efectivo esperado
Cash Counted	Physical cash counted - efectivo contado
Variance	Difference between counted and expected - diferencia
Balance Due	Money the customer owes - deuda del cliente
Available Credit	Approved unused credit - credito disponible
Money Refund	Money returned to customer - reembolso
Reduce A/R	Reduce customer debt - reducir cuenta por cobrar
Confirm Received	Receiver accepts delivered quantity - confirmar recibido

Need help?

Stop the transaction before guessing. Record the customer, receipt, register and transfer reference, then contact the store supervisor or system administrator.

End of guide - use only the production system and current store policy.
